

HTML Emmet Snippets

type this:

```
.wrap>ul.list>.sites
```

get this:

```
<div class="wrap">  
  <ul class="list">  
    <li class="sites"></li>  
  </ul>  
</div>
```

Boost Your HTML Workflow with Emmet

Emmet is a powerful shorthand tool that speeds up HTML coding. Simply type the snippet in your editor (VS Code, Sublime, etc.), hit Tab or Enter, and it expands into full HTML code instantly.

1. Skip the Div

You don't need to type "div" in Emmet! Just use `.` for a class or `#` for an ID, and Emmet will assume it's a div.

type this:

div.container

or this:

.container

get this:

<div class="container"></div>

2. Basic Multiplication

Create multiple elements at once

type this :

div * 4

get this :

<div></div>

<div></div>

<div></div>

<div></div>

3. Nesting Elements (>)

Place an element inside another

type this :

p>span

get this :

<p>

</p>

4. Siblings (+)

Place elements next to each other

type this :

div+section+footer

get this :

<div></div>

<section></section>

<footer></footer>

5. Grouping (())

Structure complex layouts easily

type this :

```
(header>ul>li*2)+main
```

get this :

```
<header>
```

```
  <ul>
```

```
    <li></li>
```

```
    <li></li>
```

```
  </ul>
```

```
</header>
```

```
<main></main>
```

6. Adding Classes & IDs

Quickly add classes and IDs to elements

type this :

.container

get this :

<div class="container"></div>

type this :

#main

get this :

<div id="main"></div>

7. Adding Text ({})

Insert text content directly inside elements

type this :

p{Hello, World!}

get this :

<p>Hello, World!</p>

8. Numbering (\$)

Automatically number elements in a sequence

type this :

```
ul>li.item-$*3
```

get this :

```
<ul>
```

```
<li class="item-1"></li>
```

```
<li class="item-2"></li>
```

```
<li class="item-3"></li>
```

```
</ul>
```

Hopefully You Found It Usefull!
