Day 14

HTML SNIPPETS

## EVERY DEVELOPERS MUST KNOW

HTML Learning series

🌟 Favicon

A favicon is the small icon that appears on the browser tab, bookmark bar, and search results. It's a small detail that makes a big impact on your brand's visibility and professionalism.

```html
<link rel="icon" href="icon.png" type="image/png">
```
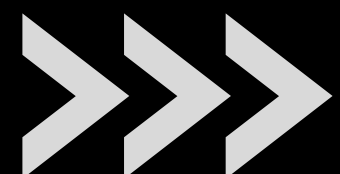

>>>

◆ Viewport

The viewport is the user's visible area of a web page — it varies by device (desktop, tablet, mobile). To make your website responsive, you must set the viewport using the <meta> tag.

```html
<meta name="viewport" content="width=device-width, initial-scale=1.0">
```
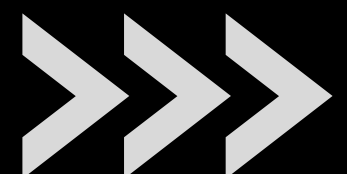

>>>

🎨Theme Color

The theme-color meta tag allows you to customize the browser's UI color, especially on mobile devices. It sets the color of the browser address bar, task switcher, and sometimes tab highlights.

```html
<meta name="theme-color" content="#0f172a">
```
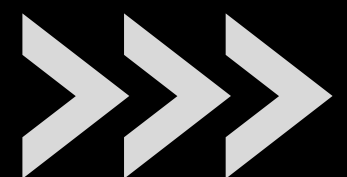

>>>

📞 Call and SMS Links

Make your website more interactive by allowing users to call or message you with just one click — especially helpful on mobile devices!

```html
<a href="tel:+911234567890">Call Us</a>
<a href="sms:+911234567890">Send SMS</a>
```
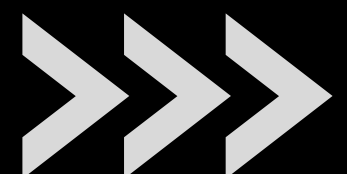

»»

🔄 HTML Redirect

Use the <meta http-equiv="refresh"> tag to set up a redirect in pure HTML — no JavaScript needed!

```html
<meta http-equiv="refresh" content="5;url=https://example.com">
```

>>>
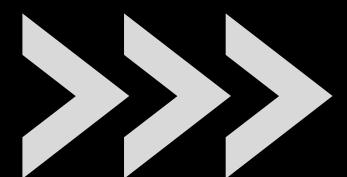

⚡ Async JavaScript Loading

Use the async attribute in your <script> tag to load JavaScript without blocking HTML rendering.

```
<script src="script.js" async></script>
```

>>>

# 🔒 noopener and noreferrer

When using target="_blank" in anchor tags, always add rel="noopener noreferrer" to improve security and performance.

```html
<a href="https://example.com" target="_blank"
rel="noopener noreferrer">
  Visit Site
</a>
```
