

CSS Gradients: A Quick Reference

CSS gradients produce smooth transitions between two or more colors. Commonly used for backgrounds, masks, borders, and overlays without additional image assets.

Linear gradients

- `linear-gradient(<angle>, <color> <stop>, ...)`
- `<angle>`: degrees (`45deg` ...) or keywords (`to right`, `to bottom left` ...)
- `<stop>`: optional, marks where the color fully stops. Percentage or lengths.

```
1  /* 90deg angle, same as to right */  
2  /* Start with #00c6ff, end with #0072ff */  
3  /* Turns into #0072ff at 70% mark */  
4  background: linear-gradient(90deg, #00c6ff, #0072ff 70%);
```

```
1  /* 90deg angle, same as to right */  
2  /* Start with #00c6ff, end with #0072ff */  
3  /* Turns into #0072ff at 30% mark */  
4  background: linear-gradient(90deg, #00c6ff, #0072ff 30%);
```

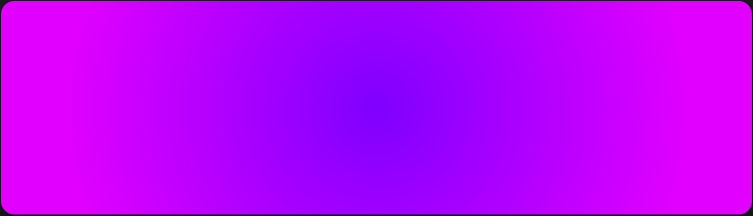

```
1 /* 225deg angle, same as to bottom left */  
2 /* Start with #00c6ff, end with #0072ff */  
3 /* Turns into #0072ff at 70% mark */  
4 background: linear-gradient(135deg, #00c6ff, #0072ff 70%);
```

Radial gradients

- `radial-gradient(<shape> <size> at <position>, <color> <stop>, ...)`
- `<shape>`: `circle` | `ellipse`
- `<size>`: `closest-side` | `farthest-side` | `closest-corner` | `farthest-corner` | explicit length
- `<position>`: `center` | `top` | `bottom` | `left` | `right` | combinations | coordinates (one value -> x) (two values -> x,y)

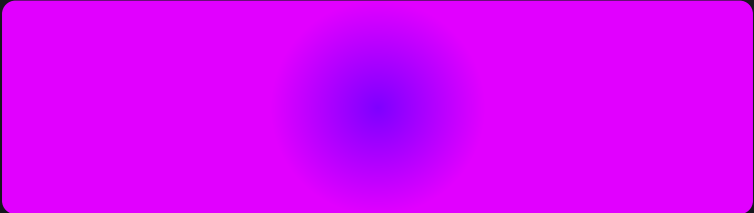

```
1  /* Circle at the centre */
2  /* Start from #7f00ff, turn into #e100ff at 80% mark */
3  background: radial-gradient(circle at center, #7f00ff,
    #e100ff 80%);
```

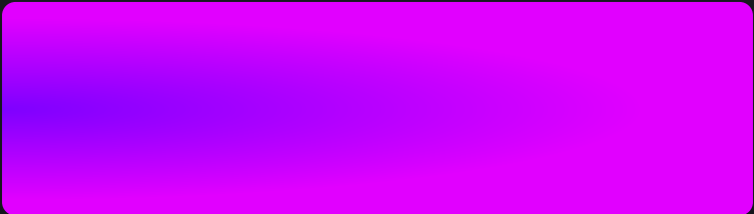

```
1  /* Circle at the centre */
2  /* Start from #7f00ff, turn into #e100ff at farthest side
   */
3  background: radial-gradient(circle farthest-side at center,
    #7f00ff, #e100ff);
```

```
1  /* Circle at the centre */  
2  /* Start from #7f00ff, turn into #e100ff at closest side */  
3  background: radial-gradient(circle closest-side at center,  
    #7f00ff, #e100ff);
```

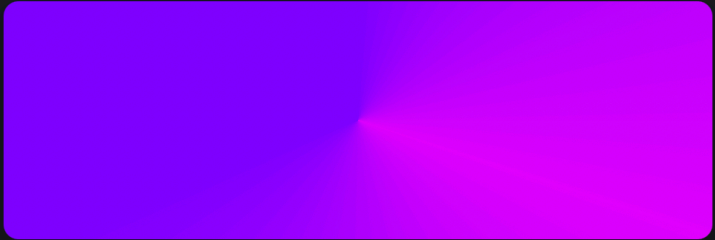

```
1  /* Ellipse at the left side */  
2  /* Start from #7f00ff, turn into #e100ff at 60% mark */  
3  background: radial-gradient(ellipse at left, #7f00ff,  
    #e100ff 60%);
```

Conic gradients

- `conic-gradient(from <angle> at <position>, <color> <stop>,
...)`

```
1 /* Start at 0deg, 12 o'clock direction */
2 /* Start from #7f00ff, change into #e100ff at 30% mark,
   change back into #7f00ff at 70% mark */
3 background: conic-gradient(from 0deg, #7f00ff, #e100ff 30%,
   #7f00ff 70%);
```

```
1  /* Color wheel */  
2  background: conic-gradient(#ff0000, #ff7a00, #ffef00,  
    #00c853, #00b0ff, #304ffe, #7c4dff, #d500f9, #ff0000);
```

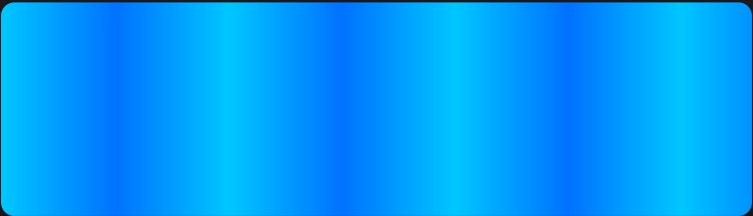

Repeating gradients

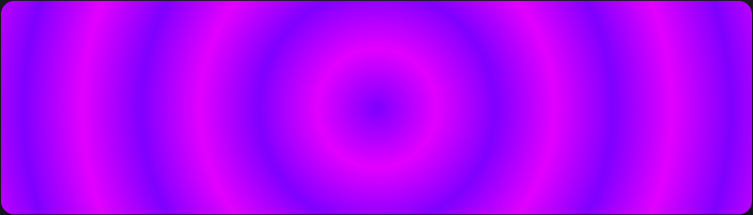

`repeating-linear-gradient()` and `repeating-radial-gradient()`

repeat the color pattern indefinitely.

```
1 | background: repeating-linear-gradient(90deg, #00c6ff,  
    | #0072ff 15%, #00c6ff 30%);
```

```
1 | background: repeating-radial-gradient(circle at center,  
   | #7f00ff, #e100ff 15%, #7f00ff 30%);
```

Blending & masks

Use `background-blend-mode` to combine layers.

```
1 background-blend-mode: multiply;  
2 background:  
3   linear-gradient(to bottom, #ffff00, #000000),  
4   repeating-linear-gradient(90deg, #00c6ff, #0072ff 15%,  
   #00c6ff 30%);
```
