

CSS Filters: Quick Reference & Examples

blur(px).

Applies a Gaussian blur to the rendered element, good for softening or hiding details.

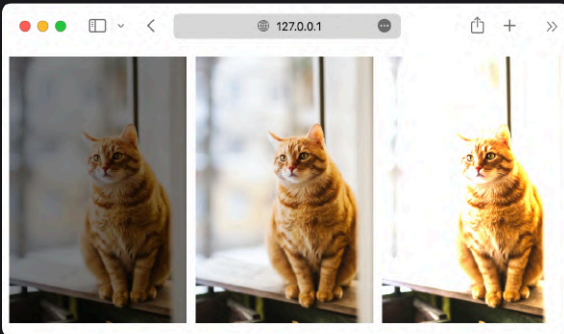

```
1 .image {  
2   filter: blur(4px);  
3 }
```

brightness(% or number)

Adjusts the brightness of the element. `1` (or `100%`) means unchanged, `0` means completely black. Useful for dimming backgrounds behind text or creating hover highlights.

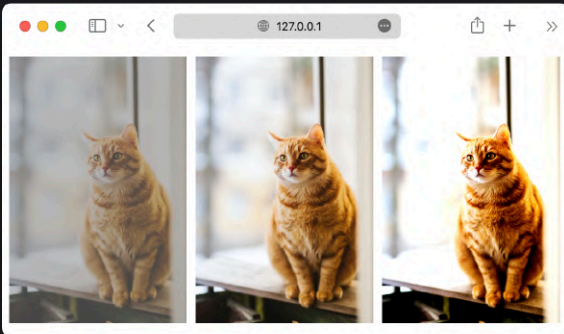

```
1 img.photo {  
2   filter: brightness(0.8);  
3 }
```

contrast(% or number).

Increases or decreases contrast. **1** is unchanged.

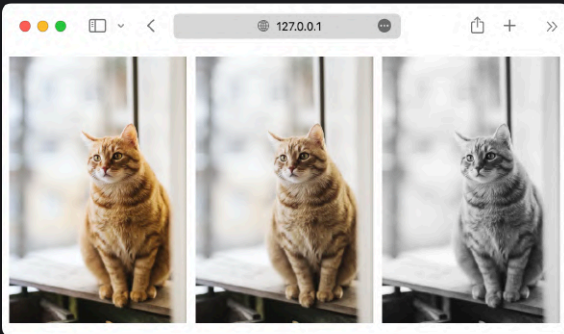

```
1 .image {  
2   filter: contrast(1.2);  
3 }
```

grayscale(% or number).

Converts colors toward gray. `1` or `100%` is fully gray.

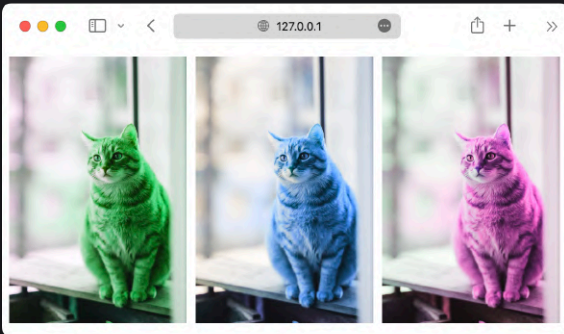

```
1 .image {  
2   filter: grayscale(100%);  
3 }
```

hue-rotate(deg).

Rotates the hue around the color wheel, in degrees.

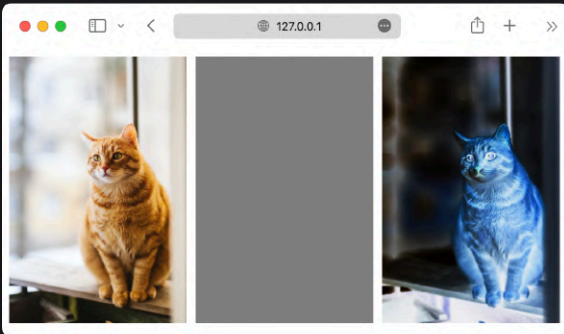

```
1 .image {  
2   filter: hue-rotate(90deg);  
3 }
```

invert(% or number).

Inverts colors. **1** is full inversion.

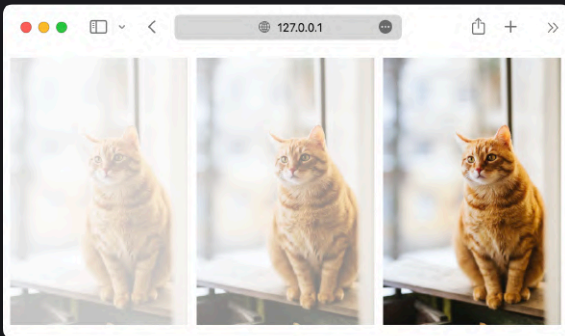

```
1 .image {  
2   filter: invert(1);  
3 }
```

opacity(% or number).

Changes element opacity as part of the filter chain (different from the `opacity` property which affects the whole element including children).

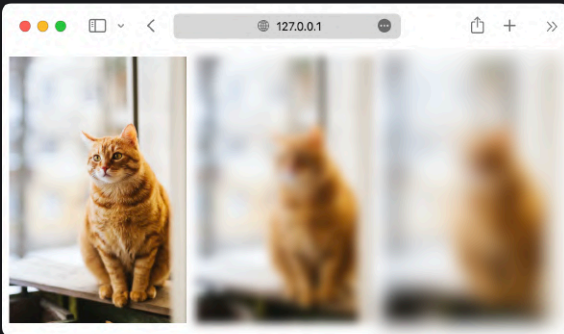

```
1 .image {  
2   filter: opacity(0.5);  
3 }
```

saturate(% or number)

Adjusts color saturation. **1** is unchanged.

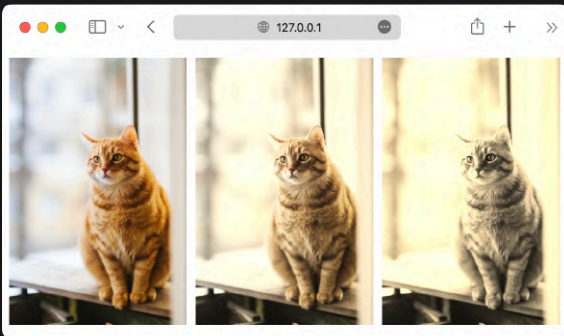

```
1 .image {  
2   filter: saturate(2);  
3 }
```

sepia(% or number).

Applies a warm, brownish tone reminiscent of old photos.

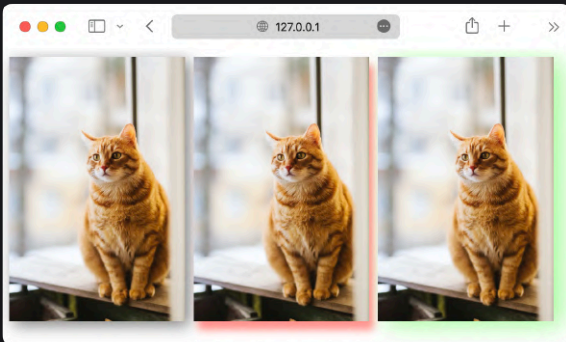

```
1 .image {  
2   filter: sepia(60%);  
3 }
```

drop-shadow(offsetX offsetY blur color)

Adds a shadow to the element's rendered content, like `box-shadow`, but works on images and filtered content.

```
1 .image {  
2   filter: drop-shadow(0 4px 6px rgba(0, 0, 0, 0.3));  
3 }
```

Combining filters

Multiple filters can be combined in a space-separated list. Order matters, they compose left-to-right:

```
1 | .image {  
2 |   filter: grayscale(100%) blur(2px) contrast(1.1);  
3 | }
```

Backdrop filters

Applies filter to the backdrop (what's behind the element), commonly used for frosted-glass UI.

Requires background with some transparency and set `-webkit-backdrop-filter` for Safari.

```
1 .frosted {  
2   background: rgba(255, 255, 255, 0.4);  
3   backdrop-filter: blur(8px) saturate(120%);  
4   -webkit-backdrop-filter: blur(8px) saturate(120%);  
5 }
```
