CSS Units Cheatsheet

Absolute units

Unit	Description
px	Device pixels (logical). Use for precise control, but combine with relative units for responsiveness.
pt	Print-focused point unit; rarely used for web layout.
pc	Picas; 1pc = 12pt. Print-focused.
cm	Centimeters; print-focused.
mm	Millimeters; print-focused.
q	Quarter-millimeters; 1q = 0.25mm. Print-focused.
in	Inches; print-focused.

Relative units

Unit	Description
em	Relative to the element's <code>font-size</code> . Useful for component-relative sizing.
rem	Relative to the root (<code>html</code>) <code>font-size</code> . Great for global scaling.
%	Relative to the parent property (width, height, etc.). Context-dependent.
cap	Relative to the height of a capital letter.
ic	Relative to the width of a CJK ideographic character.
lh	Relative to the element's line-height.
rlh	Relative to the root element's line-height.
ex	Relative to the x-height of the font.

Viewport units

Unit	Description
vw	1% of viewport width. Useful for full-viewport sections.
vh	1% of viewport height.
vmin	1% of the smaller viewport dimension.
vmax	1% of the larger viewport dimension.
vi	1% of viewport inline size.
vb	1% of viewport block size.
svw	1% of small viewport width.
svh	1% of small viewport height.
svmin	1% of the smaller small-viewport dimension.
svmax	1% of the larger small-viewport dimension.
lvw	1% of large viewport width.
lvh	1% of large viewport height.
lvmin	1% of the smaller large-viewport dimension.
lvmax	1% of the larger large-viewport dimension.
dvw	1% of dynamic viewport width.
dvh	1% of dynamic viewport height.

Unit	Description
<code>dvmin</code>	1% of the smaller dynamic-viewport dimension.
<code>dvmax</code>	1% of the larger dynamic-viewport dimension.

Container query units

Unit	Description
cqw	1% of the container's width.
cqh	1% of the container's height.
cqi	1% of the container's inline size.
cqb	1% of the container's block size.
cqmin	1% of the smaller container dimension.
cqmax	1% of the larger container dimension.

Character units

Unit	Description
ch	Width of the 0 (zero) character. Helpful for monospace width approximations.
ex	x-height of the font. Less consistent across fonts.

Flexible units

Unit	Description
fr	Fractional unit used in CSS Grid to allocate remaining space.

Angle units

Unit	Description
deg	Degrees.
rad	Radians.
grad	Gradians.
turn	Full turns.

Time units

Unit	Description
s	Seconds.
ms	Milliseconds; 1s = 1000ms.
